

Circularity Assessment

CIRCULARITY ASSESSMENT IN PROCESSES AND PRODUCTS

KEY WORDS

CIRCULAR ECONOMY,
METRICS,
DIAGNOSIS

DESCRIPTION

This capability focuses on analyzing and quantifying how circular a product, process, or organization is. Using standardized metrics and indicators, a complete diagnosis of material and energy flows is performed. The goal is to identify critical points of value loss and opportunities to implement circular economy strategies, such as reuse, repair, remanufacturing, and recycling. We provide a detailed analysis that allows companies to understand their starting point, set improvement goals, make informed decisions to close loops, and communicate their circularity performance transparently and credibly.

APPLICATIONS

- Circularity assessment of a specific product
- Waste flow analysis
- Business model evaluation
- Comparison of circularity between different solutions.
- Support for sustainability reports
