

# PUCV Institutional Recycling System

## INTEGRATED WASTE MANAGEMENT AND ENVIRONMENTAL TRACEABILITY

### KEY WORDS

RECYCLING,  
SUSTAINABILITY,  
TRACEABILITY

### DESCRIPTION

PUCV has an institutional system for managing non-hazardous waste that reduces its environmental impact and promotes a circular economy. Since 2022, this system has operated across all campuses and locations, with more than 40 recycling points for separating materials at the source (paper, plastic, glass, aluminum, and general waste). The system includes transport by electric vehicle, secondary sorting, compaction, baling, and collection by authorized waste management companies, ensuring traceability to final disposal. This initiative is led by the Environmental Management Unit and is complemented by internal awareness campaigns and adherence to institutional sustainability standards, reinforcing an active environmental culture within the university community.

### APPLICATIONS

- Replicable recycling models
- Environmental awareness
- Traceability in compliance with EPR
- Green infrastructure
