

Development and Innovation for New Products

SUPPORT IN THE FORMULATION AND EXECUTION OF R&D&I PROJECTS

KEY WORDS

INNOVATION,
SUSTAINABILITY,
WASTE
VALORIZATION

DESCRIPTION

The Curauma Biotechnology Center (NBC) at PUCV supports companies and organizations in the design and development of innovation projects focused on sustainability and the circular economy. Its multidisciplinary team provides guidance on the technical formulation of R&D&I projects, the search for and management of funding from public and private entities, and support during the execution and validation of results. The center has bioprocess laboratories, anaerobic digestion equipment, fermentation and waste treatment facilities, pilot systems for process validation and optimization, and innovation management and planning tools.

The NBC promotes the development of new products and solutions from industrial waste and by-products, encouraging the incorporation of clean technologies and bioprocesses that add value and improve business competitiveness.

APPLICATIONS

- Formulation and management of R&D&I projects with public or private funding.
- Development of new products from industrial waste.
- Implementation of clean production models.
- Technology transfer and support for companies.
