### DESCRIPTION

The Program for the Development of Sustainable Production Systems (PDSPS) possesses experience in developing environmental impact assessments focused on analyzing production systems, industrial processes, and value chains, considering both direct and indirect environmental impacts. Their capabilities integrate sustainability criteria, resource efficiency, and mitigation of negative externalities, supporting strategic decision-making in complex production contexts.

### APPLICATIONS

- Environmental assessment of production processes;
- Sustainability analysis in industrial projects;
- Support for environmental mitigation strategies;
- Environmental diagnosis for decision making
