

# Chemical Engineering

## KEY WORDS

CHEMISTRY,  
ENERGY,  
ENVIRONMENT

## MAIN CONTENTS

Organic chemistry  
Reactive and process systems  
Thermodynamics  
Inorganic chemistry  
Polymer chemistry  
Heat transfer  
Economics and management  
Thermal separation

## COURSE DYNAMICS

This program trains scientific experts to design, integrate, and supervise high value-added industrial and economic systems in sectors such as chemicals, energy, agri-food, pharmaceuticals, cosmetics, environment, and health and safety. They lead multidisciplinary operations, managing technical, strategic, organizational, commercial, and human aspects of innovative processes for modern industry.

## LANGUAGE

French

## EVALUATION METHODOLOGY

Exams, practical work, internships
