

Environmental Education and Awareness Plan

KEY WORDS

PLASTICS,
IMPACT,
CIRCULARITY

MAIN CONTENTS

The Plan has two stages: 1) theoretical and practical environmental education training, focused on promoting waste recycling as a healthy and strategic habit to encourage proper waste management, as well as strengthening and enhancing a circular and sustainable economy. The courses are geared towards different audiences and levels of complexity; 2) implementation of a pilot program within the institution for separating wet and dry waste for proper recycling.

COURSE DYNAMICS

The Environmental Education and Awareness Plan includes both theoretical and practical components. The number of sessions varies depending on the needs of the requesting organization, as does the level of detail covered. Additionally, depending on the city and the development of the local recycling system, visits will be organized to illustrate the recycling process to participants.

LANGUAGE

Spanish

EVALUATION METHODOLOGY

Participants eligible for evaluation will be those who attended 75% or more of the mandatory meetings. The evaluation consists of each member orally presenting a pilot test proposal for their organization.
